EDUCATION

Jamia Millia Islamia University, New Delhi <i>B.Tech in Electrical Engineering — SPI: 8.51/10</i>	2021 – 2025
Class XII (CBSE): 94.8%	2020 – 2021
Class X (CBSE): 92.2%	2018 – 2019

EXPERIENCE

Research and Development Trainee <i>Denso International India Pvt. Ltd. — Manesar, Haryana</i>	July 2025 – Present
- Supported engineering design activities by reviewing system layouts, interfaces, and component placement using Siemens NX. - Prepared and maintained structured technical documentation, specifications, and revision-controlled design records. - Assisted in drafting and updating 2D drawings with basic AutoCAD exposure to support internal design communication. - Coordinated with cross-functional teams to track design changes, action items, and implementation status. - Followed standard engineering processes including quality checks, issue tracking, kaizen, and 5S practices.	
Summer Training Intern <i>Tata Power DDL — New Delhi, India</i>	June 2024 – July 2024
- Reviewed electrical layouts and single-line diagrams to support LV/MV distribution planning activities. - Assisted in preparing reports, schedules, and documentation using MS Excel and Word for field coordination. - Maintained cable records, markups, and revisions supporting design-operate-maintain workflows. - Participated in coordination meetings and documented observations related to fault analysis and restoration.	
Industrial Training Intern <i>Tesla Transformers (India) Ltd — Bhopal, Madhya Pradesh</i>	June 2023 – July 2023
- Studied design and manufacturing layouts of power transformers including core, winding, insulation, and assembly. - Observed integration of electrical components and adherence to quality standards in shop-floor operations.	

TECHNICAL SKILLS

Automation & Engineering Tools: MATLAB, SIMULINK, AutoCAD, HOMER Pro, PVsyst, Revit
Programming Fundamentals: Python, Pandas, Matplotlib C, MATLAB scripting
Electrical Systems: LV/MV distribution, SLD interpretation, protection basics, IEC/IS standards

PROJECTS

Hydrogen Fuel Cell-Based Electric Bicycle <i>BLDC, Power Electronics</i>	2025
- Designed and implemented a BLDC motor-based electric bicycle with controller integration and battery management. - Integrated a PEM fuel cell as an auxiliary power source to extend range and improve system efficiency. - Worked on system-level electrical interfacing, control logic, and performance evaluation.	
Off-Grid Hybrid Renewable Energy System <i>HOMER Pro, MATLAB</i>	2024
- Designed a PV-Wind-Hydrogen hybrid system for reliable rural electrification. - Performed optimization and techno-economic analysis achieving competitive LCOE and LCOH values.	

PUBLICATIONS

State-of-Charge Estimation of Li-Ion Battery in Electric Vehicles Using Deep Neural Network —
Presented at IC3ECSBHI-2025 (International Conference).

LEADERSHIP AND ACHIEVEMENTS

Chairperson, IEEE Power and Energy Society (PES), JMI (2023 – 2025); led technical and industry-focused initiatives.
Finalist, Smart India Hackathon 2024 (Hardware Edition), Ministry of Power, Govt. of India.
Winner, Ideathon 2024 on Decentralized Solar Energy Systems, DTU-Incubate IIF.
